

Querydsl

Intro

About Querydsl

- Originally created by Timo Westkämper in 2010 and owned by Mysema
- Now owned by Querydsl team (Timo + others)
- Ongoing development (latest from Sep 2016)

<https://github.com/zbynekvavros/querydsl-intro.git>

Why to use it?

- Criteria API => Querydsl is more compact
- JOOQ => far from feature complete.
- Overall more user friendly
- Spring Data support
- Spring REST API support
 - `public ResponseEntity<List<Person>>`
`findAll(@QuerydslPredicate(root = Person.class)`
`Predicate predicate, Pageable pageable)`
